- True Airless Dispensing
- Short Lead Times

The beauty and personal care markets are rapidly moving towards solutions to combine the look of lux with sustainability, but incorporating the latter can be a challenge while maintaining functionality. O.Berk is capable of combining the two flawlessly with its latest line of sustainable refillable airless dispensing packages.

This line of airless packaging features a bottle-in-bottle design, with the outer container housing a three-layer cylinder. The inner container, made of PP, EVOH, and PE layers, is highly compatible with a wide variety of serums, creams, gels, and oils - ideal for personal care. Pinch waist, round, and square shapes are available in 15ml, 30ml, 50ml, 70ml, 105ml, and 150ml sizes.

Keep your customers coming back for more. O.Berk's family of refillable airless dispensing packages offers the opportunity to promote sustainability by continuously utilizing the same outer container and actuator. Create a line of personal care where the consumer purchases the complete package once, discards the used inner bottle responsibly when depleted, and pops in a refill. The concept of the replaceable container design offers you a new avenue to create long-term customer loyalty by promoting refills.

Create a package that fits your brand and delivers a lux shelf presence by choosing from multiple decorating options for the outer and inner container. If an all crystal clear glass appearance is not your style, choose from [silk-screening](#), [vacuum metalization](#), [spray coating](#), [hot-stamp](#), and labeling. The only limitation is your imagination!

Speed to market is crucial, especially in today's demanding beauty market. With lead times ranging between 6 - 8 weeks, O.Berk's packaging professionals can help you quickly bring your concept to fruition.

Minimum order quantities start at 10,000. Ask about PCR options for the refillable container's PE layer, with concentrations ranging from 25% up to 75% PCR.
